

Visual Narratives on Instagram: Repackaging Popular Issues During Prabowo Gibran Cabinet

Yogiswara Javmika*, Erika

BINUS University, Indonesia

*Correspondence E-mail: yjavmika@binus.edu

ABSTRACT

This research employed a descriptive qualitative approach. The objects of the study were comic strips uploaded on three Instagram accounts: Mice Cartoon, Paracomika, and Poliklitik, selected based on predetermined criteria. Data were collected through interviews and observations. Interviews with Paracomika explored topic selection, information gathering, repackaging processes, and comic production. Observations were conducted on 30 comic strips to examine themes, visual presentation, and audience engagement reflected in likes and comments. The findings show that comic artists primarily use information from online news portals and trending public discussions as the basis for content creation. Selected issues were transformed into comic strips through scripting, storyboarding, and visual narrative techniques. Socio-political issues generated the highest audience engagement. Satire, humor, symbolism, and simplified visual storytelling were commonly used to make complex issues easier to understand and more attractive to readers. Instagram comic strips function as an effective medium for repackaging information into accessible visual narratives. They not only attract high public engagement but also demonstrate the potential of digital comics as alternative channels for communicating contemporary social and political issues.

Keywords:

Comic artist, comic strip, information repackaging, Instagram, visual narrative.

1. INTRODUCTION

The rapid growth of social media has significantly transformed the way information is produced, distributed, and consumed in contemporary society. Among various platforms, Instagram has become one of the most influential visual-based media, enabling users to share photographs, videos, infographics, and other creative content in highly interactive environments. Data published by Meta Platforms reported that Indonesia had more than 103 million Instagram users in early 2025, indicating the platform's strong penetration and cultural relevance in digital communication. The increase in users also demonstrates how Instagram has evolved beyond entertainment into a strategic channel for information dissemination, branding, education, activism, and public discourse. Visual communication on social media is increasingly shaped by design creativity, image composition, symbolic representation, and multimodal storytelling, all of which influence user attention and engagement (Kemp, 2025; Josephson et al., 2020; Nasrullah, 2021).

The expansion of Instagram's carousel feature, which allows multiple images in a single post, has further encouraged narrative-based communication. This feature supports sequential storytelling, making it highly compatible with comic strips. Unlike single-image posts, carousel comics can present plots, character interaction, satire, conflict, and resolution through structured panels. As a result, comic artists increasingly utilize Instagram as a publishing space to reach large audiences without relying on conventional print media. Previous studies have shown that digital comics are adaptive communication tools because they combine entertainment value with persuasive and informative messages (Putra & Yasa, 2019; Cohn, 2013; Picado, 2022). In this context, comic strips are no longer limited to humor or leisure reading but have become vehicles for commentary, advocacy, and information repackaging.

Information repackaging refers to the process of transforming existing information into new forms that are more accessible, understandable, and attractive to specific audiences. In library and information science, repackaging commonly involves converting complex or technical materials into concise formats suitable for users' needs (Alfiana & CMS, 2020; Shinta & Rachman, 2020). In the digital era, however, information repackaging has expanded into multimedia forms such as short videos, memes, podcasts, and comics. Through comic strips, lengthy political news, economic debates, and social controversies may be translated into simplified visual narratives that are easier for audiences to understand and share. This transformation is particularly relevant for younger audiences who prefer fast, visual, and interactive content rather than conventional text-heavy news sources (Sun et al., 2025; Walter & Ophir, 2024).

In Indonesia, the inauguration of the Prabowo–Gibran administration in October 2024 generated widespread public attention and triggered extensive discussion across media platforms. Various issues such as cabinet composition, budget efficiency, free nutritious meal programs, governance reforms, education policies, and public controversies became highly debated topics in society. These developments created fertile material for comic artists who regularly interpret current affairs through satire, parody, caricature, and symbolic storytelling. Accounts such as Mice Cartoon, Paracomika, and Poliklitik actively uploaded comic strips responding to contemporary issues during the early months of the new

administration. Their content gained substantial interaction in the form of likes, comments, reposts, and discussions, indicating that comic strips may function as alternative channels of political and social communication.

Nevertheless, the increasing use of comics as information channels also raises important concerns. Unlike formal journalism, comic strips frequently rely on exaggeration, symbolism, irony, and satire. While these strategies may strengthen emotional appeal and entertainment value, they may also create ambiguity, misinterpretation, or ideological bias. In highly polarized political environments, humorous representations can shape public perception in subtle but powerful ways. Therefore, readers often need prior contextual knowledge of the original issues to accurately interpret the intended meaning of comic narratives (Entman, 1993; Chandler, 2025; Leone, 2024). This shows that comic strips are not neutral visual objects, but interpretive media that frame reality through selective representation.

Several previous studies have examined comics as promotional tools, entertainment products, educational media, and political satire. Research has explored visual narratives in comics (Cohn, 2013), framing in graphic communication (Schmid, 2021), semiotics of images (Chandler, 2025), and the persuasive role of humor in digital media (Minoza, 2024). Other studies have discussed social media engagement and influencer communication patterns (Wiley, 2024; Agency Analytics, 2025). These studies form the **state of the art** by showing that comics and visual media are increasingly relevant in digital communication ecosystems. However, most previous research treats comics either as entertainment artifacts or as communication tools in general contexts. Limited attention has been given to comic strips as a form of **information repackaging** that translates political and social issues into sequential visual narratives on Instagram.

This condition reveals a clear **research gap**. First, studies rarely integrate the perspective of library and information science with digital comic communication. Second, little empirical research has focused on Indonesian Instagram comic accounts responding to current governmental issues. Third, audience engagement with repackaged information through comic strips remains underexplored, especially during politically significant transitional periods such as the beginning of a new cabinet administration. Consequently, there is insufficient understanding of how comic artists seek information, transform news into narratives, and generate public interaction through visual storytelling.

The **novelty** of this study lies in three main aspects. First, it positions Instagram comic strips as a contemporary form of information repackaging rather than merely entertainment content. Second, it analyzes popular socio-political issues during the Prabowo–Gibran cabinet as a real-time communication context. Third, it combines visual narrative analysis with audience engagement indicators to understand both content production and public response. By doing so, this research contributes not only to media studies but also to library and information science, especially regarding how information is reformatted and redistributed in digital environments.

Figure 1. Example of satirical style in comic strips

Source: Instagram account @paracomika

Based on this background, this study aims to examine the process of comic artists repackaging information on popular issues through visual narratives in comic strips on Instagram during the early period of the Prabowo–Gibran administration. Specifically, this study addresses the following questions: (1) How are social issues visually represented in comic strips on Instagram during the Prabowo–Gibran cabinet period? (2) What visual communication styles are used by comic artists to convey messages about popular issues? (3) What dominant themes emerged in comic strips during this period? and (4) How is information repackaged through narrative style and visual presentation in Instagram comic strips?

2. METHODS

Authors used a descriptive method with a qualitative approach to examine the process of repackaging information through visual narratives in the form of comic strips created by comic artists. Data collection was carried out through interviews and observations of the artists' comic strips. The interviews explored the stages of comic creation, including determining the theme, gathering information sources, filtering accurate information, developing a storyboard, and producing the final comic. Meanwhile, observations focused on analyzing the comic strips uploaded to the research informants' Instagram accounts. This analysis considered the issues raised, narrative style, visual elements, and analytical notes to assess whether the issues presented were accurate or misleading. The author also examined the number of likes and comments as additional observation material to evaluate readers' or followers' engagement with the comic strips. The purpose was to determine whether the

issues highlighted originated from credible news sources or rumors, thereby ensuring that the published comics did not contain hoax illustrations. Engagement served as a benchmark for measuring readers' connection to the comic strips, with high engagement indicating that the issues presented were generally considered valid within society.

Based on this data collection method, the author determined the criteria for the Instagram accounts of the artists studied. Several criteria were used to select the Instagram accounts: (i) Number of followers. The number of followers of the accounts selected for research represents the Micro-influencer level (10,000–100,000 followers) and Macro-influencer level (100,000–350,000 followers) (Wiley, 2024). (ii) Upload frequency at least once a week. The frequency of uploads influences the Instagram algorithm, enabling posts to reach audiences beyond existing followers. This metric is utilized to assess the level of engagement with comic strip content. (iii) Content. Discussing popular issues about social, political, legal, and economic from October 2024 to August 2025. (iv) Engagement. Likes on social media platforms serve as a key form of social proof, providing content with a visible marker of approval. Consequently, a substantial volume of likes serves as an authoritative signal to prospective consumers, indicating that the content is valuable and, by extension, that the associated brand is worthy of attention and engagement. The benchmark for an adequate number of post likes is relative, depending significantly on the social media platform and the size of the user's following. On Instagram, for example, an acceptable average rate for likes per post is in the 3–6% range of followers (Agency Analytics, 2025).

From the criteria above, the selected Instagram accounts are Mice Cartoon, Poliklitik, and Paracomika.

3. RESULTS AND DISCUSSION

3.1 Informant Description

Comic strip is a sequence of closely placed images, typically laid out in a horizontal arrangement, intended to be read as a narrative or in chronological order (Kunzle, 2025). The storyline is generally created specifically for this format. Text may be included within or around the images, though it is not always necessary. When the text becomes the primary element over the visuals, the images serve mainly as illustrations for the written content. The creator is usually called comic artists.

A comic artist is responsible for crafting the visual elements of comics and graphic novels, including the layout of panels, character designs, backgrounds, and accompanying text (Indeed Editorial Team, 2025). The following table is a description of comic artists who were informants in this research:

Table 1. Informant Description

No	Informant or Account Owner	Instagram Account	Number of Follower*	Minimum Likes (3%-6%)**	Upload Frequency
1	Andri Sakti	@paracomika	25.900	777	3-4/week
2	Muhammad Misrad	@micecartoon	236.000	7080	1-2/week

3	Anonymous	@poliklitik	197.000	5910	2-3/ week
---	-----------	-------------	---------	------	-----------

3.2 Interview Results with Paracomika

Paracomika started in 2019. Initially, the comics focused on themes related to the daily lives of stand-up comedians (*komika*). However, this scope eventually expanded to address themes connected to highly discussed issues, particularly in the socio-political theme. Instagram platform was chosen due to its capacity for reaching a wide and accessible audience. The carousel feature on Instagram makes it easier for comic artists to publish their work independently (Suminto & Renzina, 2023). Social media has become a digital public space that allows users not only to communicate but also to express culture through visuals (Nasrullah, 2021). This makes social media a fertile ground for visual narratives such as comic strips to address socio-political issues. Paracomika consistently selects specific issues that are closely relevant to daily life.

3.3 Information Seeking in Selecting Issue and Topic

Information seeking in Instagram comic creation reflects the characteristics of modern, non-linear information environments as in ISMIE framework (Sun, et al. 2025).

Figure 2. Information Seeking in Modern Information Environment (ISMIE) Framework

Paracomika's information-seeking behavior is not driven solely by explicit knowledge gaps but is often activated by trending and socially salient issues circulating across digital platforms. These findings suggest a shift from traditional goal-oriented information seeking toward contextual, socially embedded practices influenced by digital media dynamics.

Figure 3. Integration of Two Themes into a Single Paracomika Word

3.4 Information Repackaging Process

Paracomika operate simultaneously as information seekers and information providers, translating and repackaging information into visual narratives through satire, metaphor, and sequential imagery. Information repackaging in digital environments involves transforming news or social issues into accessible formats through selection, interpretation, and visual presentation (Shinta & Rachman, 2021; Alfiana, 2020). In social media comics, this process overlaps with visual storytelling and multimodal narrative structures, where meaning emerges from the interaction of text, images, and panel sequencing (Chen et al., 2026; Febrianti et al., 2023). More panels tend to slow down the storytelling pace, allowing for buildup and timing of visual jokes, while fewer panels or compressed sequences can accelerate pacing and deliver punchlines more abruptly (Picado, 2022). This process corresponds with translation activity in which information is transformed before reaching audiences and shaped by intervening variables such as audience expectations and platform design (Sun et al., 2025).

The sources of information utilized by Paracomika originate from social media, online news media, official news portals, or their idea bank. Paracomika does a brief preparation from the resources. This aligned with a theory which explained that “in information repackaging it is important to create a summary of information sourced from selected materials” (Dongardive, 2013).

Once a topic is finalized, Paracomika proceeds directly to the creation of the comic, as all necessary aspects have already been thoroughly considered during the initial topic selection phase, which is following steps by (Dongardive, 2013; Atmi et al., 2025). The steps such as brief analysis, design criteria for packaging, packaging selection, creation of information packaging, and feedback system design.

3.5 Creative and Narrative Process

The creation of Paracomika comic strip begins with a script, which is then translated into visuals and narratives. Visual narratives, whether as single images or sequential panels, derive their narrative quality from how panels are arranged to convey the passage of time and structure a story with a clear beginning, middle, and end. This panel sequencing is not only a creative choice that influences production time but also a fundamental aspect of narrative reasoning itself. Recent work by shows through a hierarchical knowledge graph framework that models comics at multiple levels of narrative abstraction, linking characters, actions, spatial and temporal relations across panels to support structured understanding of story progression and timeline reconstruction (Chen, 2025; Paval et al, 2025).

Paracomika also adds captions related to the comic strips to explain more about the story. Combining words with visuals can communicate meaning and engage audiences offering interpretations that differ from images presented without text (Josephson, 2020). That visual stories must deliver their message concisely, often within a limited space and with minimal text support. Character depictions and the story narrative in Paracomika are deliberately hyperbolized to enhance the humorous and satirical effects. They don't use framing in their visual narrative. However, even though the artists seem neutral, the readers have different perceptions in interpreting the comic strips. The concepts of frames and framing encompass various elements that guide attention, shape perception, and influence interpretation (Schmid, 2021; Chon, et.al, 2023).

A natural starting point for examining framing in graphic narratives is the comics panel itself. Each panel guides the reader's focus on specific events, determining what details are shown or omitted at a given moment and which aspects are emphasized. Framing involves processes of selection and emphasis. It highlights certain elements of perceived reality within a text to shape how an issue is defined, interpreted, morally judged, and potentially addressed (Entman, 1993; Walter & Ophir, 2024; Dong & Nizam, 2025).

3.6 Public Response and Ethics

Paracomika has received negative feedback in the comment sections; however, comments deemed destructive or divisive are generally not engaged with or responded to. While comics serve as effective tools for social commentary and political satire, they also present distinct challenges (Minoza, 2024). The reliance on visual elements can lead to misinterpretation, and satire may blur the line between critique and offense. Consequently, negative feedback from some audiences is to be expected.

Regarding ethical considerations when creating work with sensitive messages or complex issues, Paracomika adapts its approach based on its target audience. For instance, when critiquing President Prabowo, the criticism is directed towards his role as president, not his personal character. The collective ensures the work does not frame a specific agenda, preferring to allow the audience to independently derive the intended message. Based on observation, comic artists rarely reply to comments from their followers.

3.7 General Overview

This study examined 30 comic strip posts from three Instagram accounts published following the inauguration of the Prabowo–Gibran Cabinet. The dataset included upload date, caption, addressed issue, narrative style, dominant visual elements, information source, number of likes and comments, and analytical notes.

On average, the posts received 18,172 likes and 394 comments, reflecting a high level of audience engagement. These metrics suggest that the comic strips are effective in communicating current issues to Instagram users.

3.8 Distribution of Issues Addressed

The analysis identified diverse themes addressed by comic artists. Socio-political issues were most prevalent (11 posts), followed by socials (5), politics (4), economics (3), education (2), law (2), education and law (2), and sport (1).

These findings indicate that comic strips serve as a medium for repackaging information about various events that attract public attention. The frequent selection of major societal issues highlights the artists' focus on contemporary national discourse.

3.9 Narrative Style in Comics

The narrative style analysis revealed a predominant use of satire (10 posts), followed by cynicism (3), and various other styles, including metaphor, paradox, irony, sarcasm, and simile.

Language style is a way of expressing thoughts through language in a distinctive way that shows the soul or personality of the writer (language user). Some language styles that are used by Paracomika categorized in Table 5 explained by (Stark 2016 & Prandi, 2017).

Table 5. Language Style

No	Style	Definition
Figurative Language		
1	Simile	Explicit comparison
2	Methapor	An analogy that compares 2 things directly but in a short form
3	Irony, cynicism, sarcasm	Irony is a reference to saying something with a different meaning or purpose than what is contained in the words. Cynicism is a satire that takes the form of doubt which contains mockery of sincerity and sincerity. Sarcasm is a cruder reference to irony and cynicism.
4	Satire	Descriptions that must be interpreted differently from their surface meaning
Rhetorical language		
1	Hyperbole	a style of language that contains an exaggerated statement

2	Paradox	a style of language that contains a clear contradiction to existing facts
---	---------	---

The frequent use of satire reinforces the comic strip's role as a medium for social critique, enabling the communication of critical perspectives on government policies and social phenomena while maintaining entertainment value.

3.10 Semiotics in Comic Strips Observations

Based on the observation result, sometimes it needs semiotics to understand the comic strips because of less narrative explanation. Semiotics examine the relationship between signs, meanings, and their interpreters, arguing that all communicative forms, including images, symbols, and sequencing in comics (Chandler, 2025).

For the example, comic strip by Mice Cartoon number 12 from the table that only emoticon with illustration of the 4th President of Republic Indonesia. This needs an effort to be understandable if we don't know the context related to the news even though it has dialog. Another sample by Mice Cartoon number 13 that illustrated a brown burst balloon with caption *Hatiku sangat kacauuu!*. The brown balloon refers to Indonesia Police who wear brown uniform. Meanwhile the burst effect refers to the case of police who shot high school student in Semarang. This sample needs to be understandable that explained in semiotic ideology on how people construct meaning through non-verbal communication (Leone, 2024).

3.11 Audience Response

The high average engagement rate, reflected in thousands of likes and hundreds of comments per post, suggests that audiences both enjoy the comics and actively engage with the issues presented. This interaction highlights the comic strip's function as a digital forum where public opinion is shaped through the integration of text, visuals, and humor. Comics evoke strong emotional responses, which enhances their effectiveness as a medium for satire (Minoza, 2024). By employing exaggeration, caricature, and humor, comics effectively illuminate the absurdities of political systems and social norms in ways that engage readers.

This observation supports the perspective that Instagram comic strips constitute a distinct ecosystem for the dissemination of information. They also exemplify information repackaging. News originating in mass media or public discourse is selected, filtered, and transformed into visual narratives that are accessible to a broad audience.

4. CONCLUSION

The study concludes that Instagram comic strips serve as dynamic platforms for visual storytelling and information repackaging, particularly in relation to socio-political issues following the inauguration of the Prabowo–Gibran cabinet.

1. These comics simplify and reinterpret information from media and public discourse into visual narratives that are more relatable, accessible, and engaging for digital audiences by using language style, narration style and visual elements.
2. Satire, cynicism, and explicit are employed as key strategies to convey messages about popular issues
3. Instagram comics strips generate significant public engagement, demonstrating their potential as informal yet influential tools to communicate socio-political, economic, law, education, and other related issues.
4. They show how information is repackaged through narrative style and visual presentation: issues are broken down into sequential panels that follow a clear storyline (establishing, building, peaking, and resolving events), while visual elements such as caricature, metaphor, and symbolic exaggeration frame complex realities into forms that are easier to understand and discuss.
